

Test Case 203 – CAR Special Input 2			
Name: CAR – Special File Input 2		Derived From: EBTS 1.2/EFTS 7.0	
Description: Create a CAR file with the special character test and invalid input test. Fingerprints will be collected. Right Iris will be captured and left Iris will be marked as 'Unable to Capture'. One Mug Shot will be captured (system permitting). Note: Fields that had special characters evaluated in the Test Procedure 200 – CAR Maximum input or Test Procedure 202 – Special Input 1 are not evaluated again unless the field is mandatory.		Test Result:	
System Type: Collection (Any)		Test Type: Conformance	Category: Enrollment
PASS / FAIL			
Entry Criteria: System configured to perform a CAR enrollment; Current EBTS V1.2 verification file loaded into TransactionEdit;		Overall Impact Level (1-5, N/A):	
Biometrics Required: User being enrolled will need to be able to capture all 10 prints (flat only) and be able to enroll right iris (system permitting) and left iris will be marked as unable to capture.		Test Operator:	
Exit Criteria: Output of an EFT file from the system containing all entered information		Test Date:	
Expected Result/ Pass Criteria: File created returns no errors on verification and information entered into system was reproduced correctly in the file		Test Time Length:	
Required Files/Data Sets: None		Test File (TCN and/or File Name):	
Linked Test Cases: None		Test Subject (person submitting biometrics):	
Test Start Time:		Test Stop Time:	
Procedure: Note: This procedure collects Type 2, Fingerprint, and Iris data. The enrollment software may not collect data in the order shown in this procedure. The Tester should follow through the enrollment software as it is designed. For example, this procedure collects fingerprint images prior to iris images. The software may request Iris prior to fingerprint and that is acceptable. The tester should just make a note of this.
